Loft Folding

- construction depth: 48 mm
- glazing: 6 or 8 mm
- rebate-free doors
- hinges with vertical adjustment
- powder coating in RAL palette colours

Loft steel folding doors impress with their aesthetics and functionality. Their ultra-thin profiles draw inspiration from loft-style design and match it perfectly. They work great in modern interiors, especially in offices, which are wonderfully illuminated thanks to them.

The Loft sliding system, designed for internal installation, is the ideal way to divide space. Its elements fold, connecting two rooms into one larger space. When they unfold, the space partitions again with ease.

Muntins are a lovely addition to the Loft steel bi-fold system. An investor can arrange them in almost any configuration or choose from one of the layouts suggested by the manufacturer.
